not since the landmark publication of handbook of human intelligence in 1982 has the field of

intelligence been more alive than it is today spurred by the new developments in this rapidly expanding field dr sternberg has brought together a stellar list of contributors to provide a comprehensive broad and deeply thematic review of intelligence that will be accessible to both scholar and student the field of intelligence is lively on many fronts and this volume provides full coverage on topics such as behavior genetic models evolutionary models cognitive models emotional intelligence practical intelligence and group difference handbook of intelligence is largely expanded covering areas such as animal and artificial intelligence as well as human intelligence it fully reflects important theoretical progress made since the early 1980s

the field of value alignment or more broadly machine ethics is becoming increasingly important as artificial intelligence developments accelerate by alignment we mean giving a generally intelligent software system the capability to act in ways that are beneficial or at least minimally harmful to humans there are a large number of techniques that are being experimented with but this work often fails to specify what values exactly we should be aligning when making a decision an agent is supposed to maximize the expected utility of its value function classically this has been referred to as happiness but this is just one of many things that people value in order to resolve this issue we need to determine a set of human values that represent humanity s interests although this problem might seem intractable research shows that people of various cultures and religions actually share more in common than they realize in this book we review world religions moral philosophy and evolutionary psychology to elucidate a common set of shared values we then show how these values can be used to address the alignment problem and conclude with problems and goals for future research the key audience for this book will be researchers in the field of ethics and artificial intelligence who are interested in or working on this problem these people will come from various professions and include philosophers computer programmers and psychologists as the problem itself is multi disciplinary

a radical and challenging book which argues that artificial intelligence needs a completely different set of foundations based on ecological intelligence rather than human intelligence if it is to deliver on the promise of a better world this can usher in the greatest transformation in human history an age of re integration our very existence is dependent upon our context within the earth system and so surely artificial intelligence must also be grounded within this context embracing emergence interconnectedness and real time feedback we discover many positive outcomes across the societal economic and environmental arenas and discuss how this transformation can be delivered key features identifies a key weakness in current ai thinking that threatens any hope of a better world highlights the importance of realizing that systems theory is an essential foundation for any technology that hopes to positively transform our world emphasizes the need for a radical new approach to ai based on ecological systems explains why ecosystem intelligence not human intelligence offers the best framework for ai examines how this new approach will impact on the three arenas of society environment and economics ushering in a new age of re integration
